

PVC TRIMBOARD HAS MET ITS MATCH

Introducing the long-lasting screw for the long-lasting board!

White color coated heads and stainless steel make Headcote™ a perfect match for PVC trimboard. No hammering and no puttying make Headcote™ faster, cleaner and easier to use than nails. Highly durable, UV-protected coating and stainless steel make them a smarter, long-lasting solution.

The ONE color coated fastener recommended for ALL types of decking, plus PVC trimboard!

HEADCOTE™ is a product
of Starborn Industries, Inc.

Sample Applications

The nine materials below represent those that are selected most often in the construction of decks. They are paired with the appropriate Headcote™ color.

Flat Heads

Trim Heads

Things to Consider

When choosing a Headcote™ color it is important to consider the following:

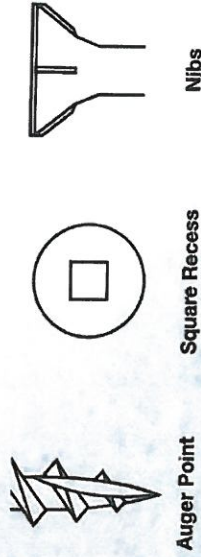

The natural variation of any wood type in both grain and color. The fact that there is a natural variation in any single type of wood, from tree to tree and board to board is something that should be understood. When selecting and accepting your decking material, check for radical variations but also understand that some variation is not only acceptable, but also visually desirable. Try matching a Headcote™ color with several boards before making a final selection.

How you will prepare and maintain your deck.

How you coat and maintain your deck should influence your Headcote™ color decision. Deck stains are applied to protect wood from the affects of weathering. Depending upon the stain selected the natural color of your deck wood can be maintained or modified. Periodic washings and reapplications of stain to your deck are needed to

Product and Usage Notes

Headcote™ fasteners come in both flat head and trim head styles. All screws are #305 stainless, have auger points, square recesses, and countersinking nibs.

For treated lumber, use only flat head screws due to the potential for warping.

In some materials, such as certain hardwoods, pilot holes may be necessary.

Some scratching of the epoxy coating may occasionally occur in the square recesses during insertion. This will not detract from the over-all appearance of the final product.

The coating used for Headcote™ has been specially formulated for durability, but like all coatings in outdoor and flooring applications it is subject to wear based on foot traffic and exposure to the elements.

PVC Trimboard w/ Headcote White

maintain the desired appearance. Choose the Headcote™ color that best blends with a finished or stained sample.

The effects of weathering. Decks that are not stained and are not coated with protective finishes will succumb to weathering and fade or change color depending on the specific material. In this case, it is best to choose the Headcote™ color that will best blend with the "weathered" decking.

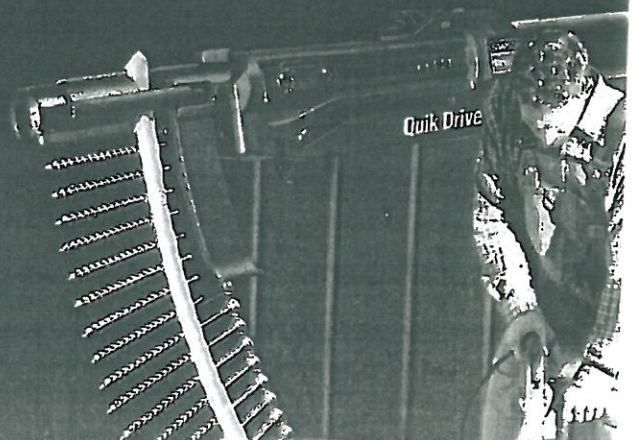

The ONE color coated fastener recommended for ALL types of decking, plus PVC trimboard!
